

IMPORTING DATA IN PYTHON II

Importing flat files from the web

You're already great at importing!

- Flat files such as .txt and .csv
- Pickled files, Excel spreadsheets, and many others!
- Data from relational databases
- You can do all these locally
- What if your data is online?

Can you import web data?

Wine Quality Data Set

Download: [Data Folder](#), [Data Set Description](#)

Abstract: Two datasets are included, related to red and white vinho verde wine samples, from the north of Portugal. The goal is to model wine quality based on physicochemical tests (see [Cortez et al., 2009], [\[Web Link\]](#)).

Data Set Characteristics:	Multivariate	Number of Instances:	4898	Area:	Business
Attribute Characteristics:	Real	Number of Attributes:	12	Date Donated	2009-10-07
Associated Tasks:	Classification, Regression	Missing Values?	N/A	Number of Web Hits:	349131

- You can: go to URL and click to download files
- BUT: not reproducible, not scalable

You'll learn how to...

- Import and locally save datasets from the web
- Load datasets into pandas DataFrames
- Make HTTP requests (GET requests)
- Scrape web data such as HTML
- Parse HTML into useful data (BeautifulSoup)
- Use the `urllib` and `requests` packages

The urllib package

- Provides interface for fetching data across the web
- `urlopen()` - accepts URLs instead of file names

How to automate file download in Python

```
In [1]: from urllib.request import urlretrieve
```

```
In [2]: url = 'http://archive.ics.uci.edu/ml/machine-learning-  
databases/wine-quality/winequality-white.csv'
```

```
In [3]: urlretrieve(url, 'winequality-white.csv')
```

```
Out[3]: ('winequality-white.csv', <http.client.HTTPMessage at  
0x103cf1128>)
```

IMPORTING DATA IN PYTHON II

Let's practice!

IMPORTING DATA IN PYTHON II

HTTP requests to import files from the web

URL

- Uniform/Universal Resource Locator
- References to web resources
- Focus: web addresses
- Ingredients:
 - Protocol identifier - http:
 - Resource name - datacamp.com
- These specify web addresses uniquely

HTTP

- HyperText Transfer Protocol
- Foundation of data communication for the web
- HTTPS - more secure form of HTTP
- Going to a website = sending HTTP request
 - GET request
- `urlretrieve()` performs a GET request
- HTML - HyperText Markup Language

GET requests using urllib

```
In [1]: from urllib.request import urlopen, Request
```

```
In [2]: url = "https://www.wikipedia.org/"
```

```
In [3]: request = Request(url)
```

```
In [4]: response = urlopen(request)
```

```
In [5]: html = response.read()
```

```
In [6]: response.close()
```

GET requests using requests

Requests

- Used by “her Majesty's Government, Amazon, Google, Twilio, NPR, Obama for America, Twitter, Sony, and Federal U.S. Institutions that prefer to be unnamed”

GET requests using requests

- One of the most downloaded Python packages

```
In [1]: import requests
```

```
In [2]: url = "https://www.wikipedia.org/"
```

```
In [3]: r = requests.get(url)
```

```
In [4]: text = r.text
```

IMPORTING DATA IN PYTHON II

Let's practice!

IMPORTING DATA IN PYTHON II

Scraping the web in Python

HTML

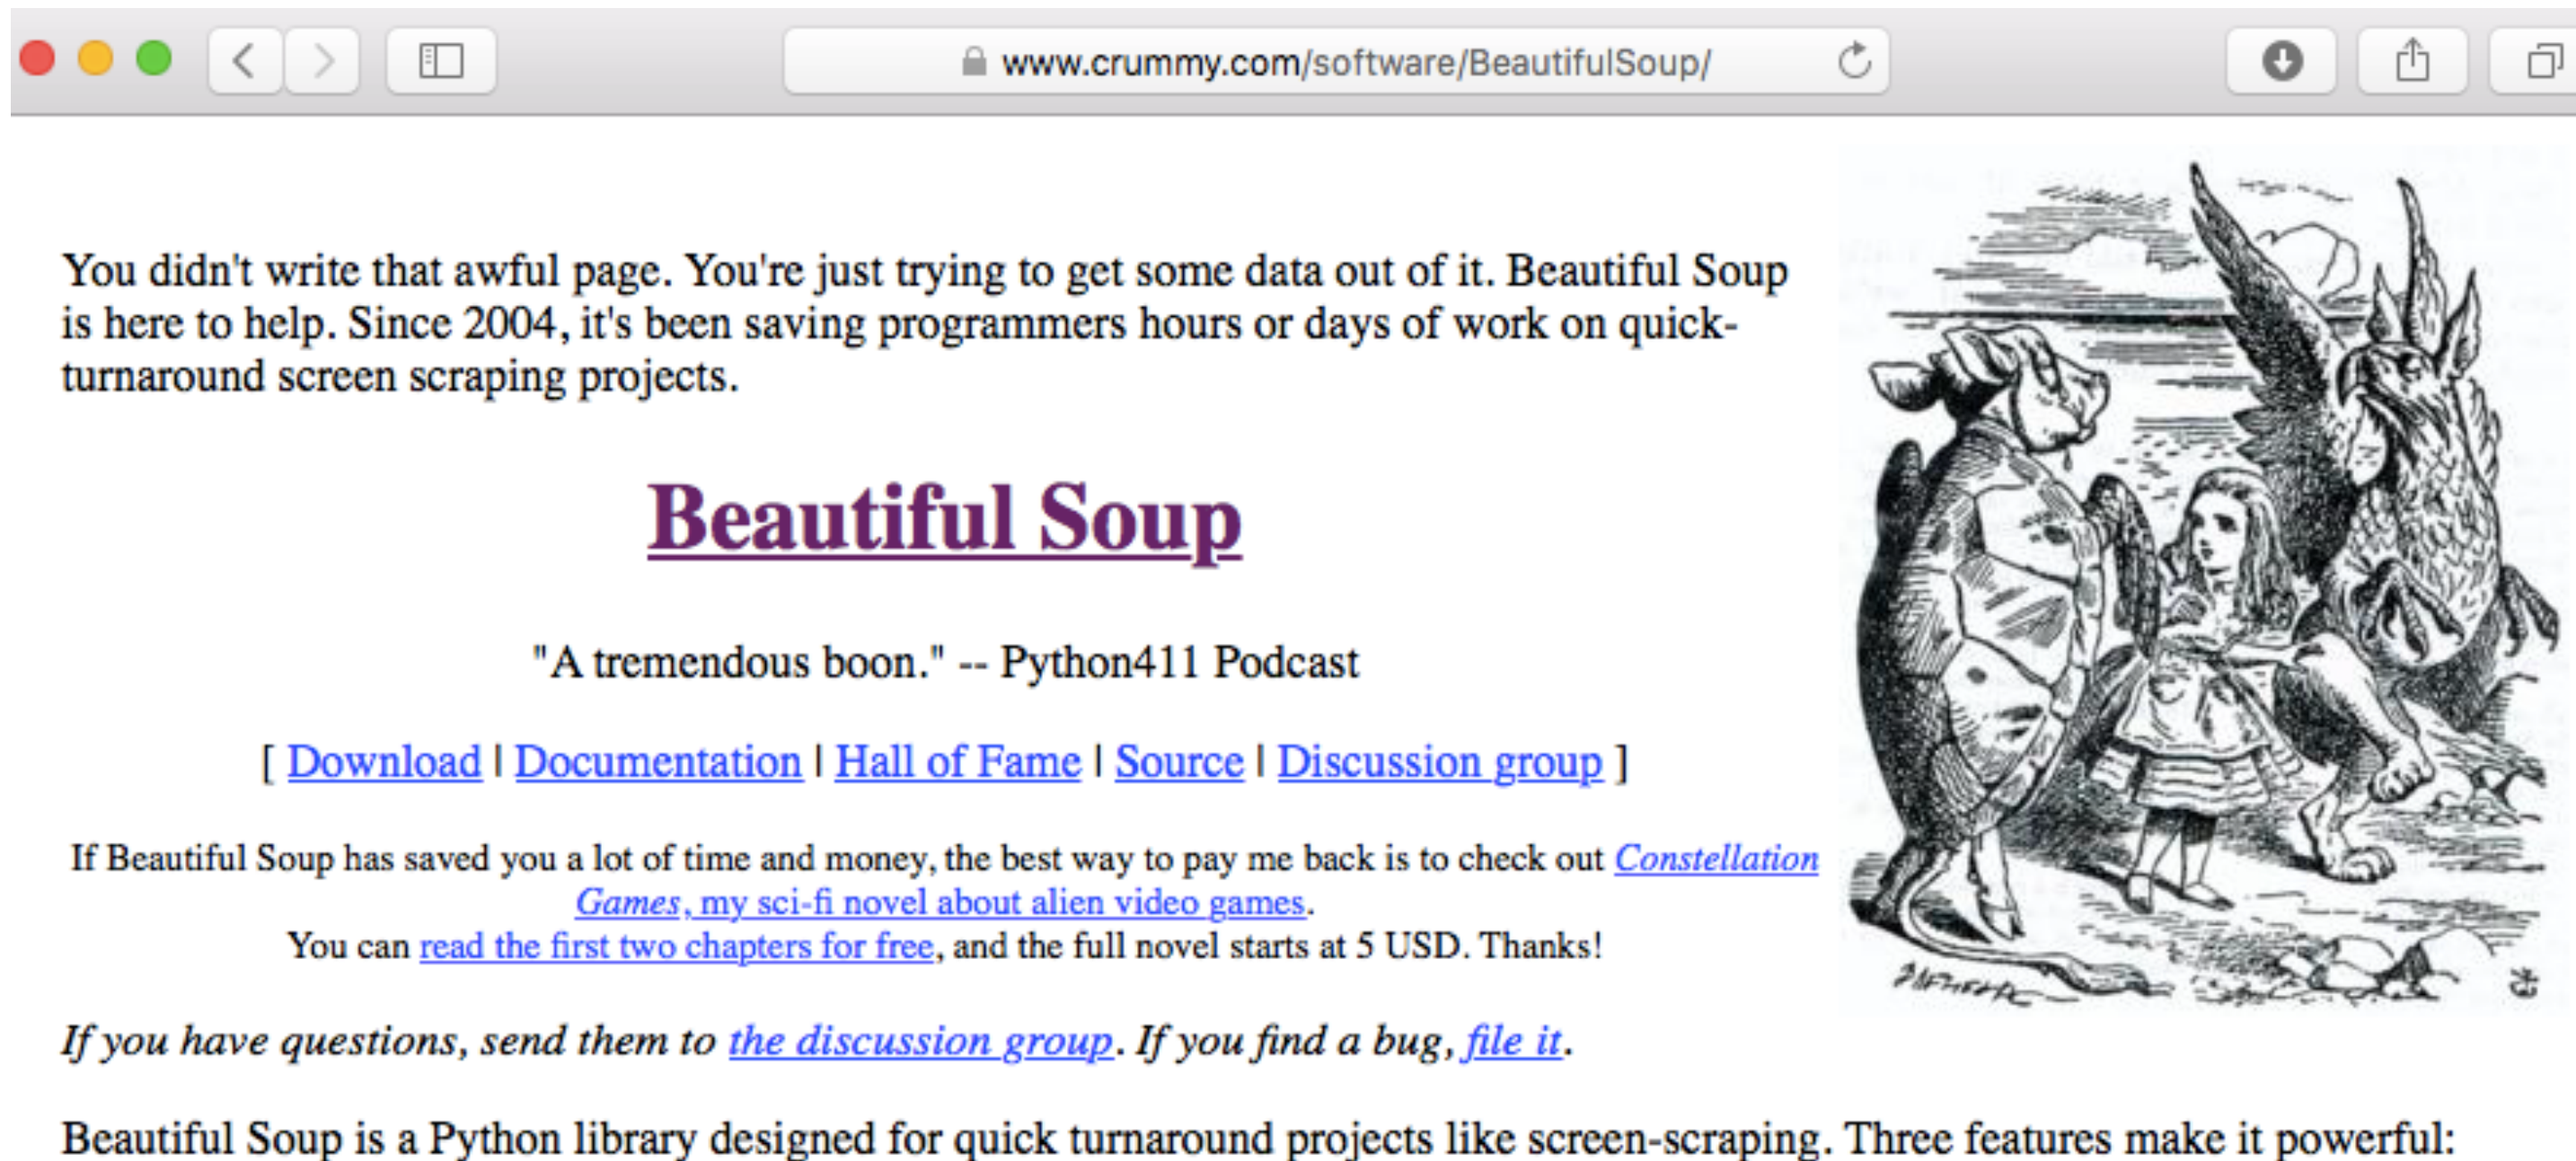

- Mix of unstructured and structured data
- Structured data:
 - Has pre-defined data model, or
 - Organized in a defined manner
- Unstructured data: neither of these properties

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <!-- SEO -->
5     <meta charset="utf-8" />
6     <title>DataCamp: The Easy Way To Learn R & Data Science Online</title>
```

BeautifulSoup

- Parse and extract structured data from HTML

The screenshot shows a web browser window with the URL www.crummy.com/software/BeautifulSoup/. The page content includes a paragraph about BeautifulSoup's purpose, the title "Beautiful Soup" in purple, a quote from Python411 Podcast, a list of links (Download, Documentation, Hall of Fame, Source, Discussion group), a promotional message for a sci-fi novel, and a closing statement about the library's features.

You didn't write that awful page. You're just trying to get some data out of it. BeautifulSoup is here to help. Since 2004, it's been saving programmers hours or days of work on quick-turnaround screen scraping projects.

Beautiful Soup

"A tremendous boon." -- Python411 Podcast

[[Download](#) | [Documentation](#) | [Hall of Fame](#) | [Source](#) | [Discussion group](#)]

If BeautifulSoup has saved you a lot of time and money, the best way to pay me back is to check out [Constellation Games](#), my sci-fi novel about alien video games.

You can [read the first two chapters for free](#), and the full novel starts at 5 USD. Thanks!

If you have questions, send them to [the discussion group](#). If you find a bug, [file it](#).

Beautiful Soup is a Python library designed for quick turnaround projects like screen-scraping. Three features make it powerful:

- Make tag soup beautiful and extract information

BeautifulSoup

```
In [1]: from bs4 import BeautifulSoup
```

```
In [2]: import requests
```

```
In [3]: url = 'https://www.crummy.com/software/BeautifulSoup/'
```

```
In [4]: r = requests.get(url)
```

```
In [5]: html_doc = r.text
```

```
In [6]: soup = BeautifulSoup(html_doc)
```

Prettified Soup

```
In [7]: print(soup.prettify())
<!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 4.0 Transitional//EN" "http://www.w3.org/TR/REC-html40
<html>
<head>
  <meta content="text/html; charset=utf-8" http-equiv="Content-Type"/>
  <title>
    Beautiful Soup: We called him Tortoise because he taught us.
  </title>
  <link href="mailto:leonardr@segfault.org" rev="made"/>
  <link href="/nb/themes/Default/nb.css" rel="stylesheet" type="text/css"/>
  <meta content="Beautiful Soup: a library designed for screen-scraping HTML and XML." name="D
  <meta content="Markov Approximation 1.4 (module: leonardr)" name="generator"/>
  <meta content="Leonard Richardson" name="author"/>
</head>
<body alink="red" bgcolor="white" link="blue" text="black" vlink="660066">
  
  <br/>
  <p>
```

Exploring BeautifulSoup

- Many methods such as:

```
In [9]: print(soup.title)
<title>Beautiful Soup: We called him Tortoise because he taught
us.</title>
```

```
In [8]: print(soup.get_text())
```

Beautiful Soup: We called him Tortoise because he taught us.

You didn't write that awful page. You're just trying to get some data out of it. BeautifulSoup is here to help. Since 2004, it's been saving programmers hours or days of work on quick-turnaround screen scraping projects.

Exploring BeautifulSoup

- `find_all()`

```
In [10]: for link in soup.find_all('a'):
.....:     print(link.get('href'))
.....:
